

WHAT IS A LARGE BEDDING ENCASING CERTIFICATION STANDARD?

Large bedding encasings, for example mattress encasings that are *certified* **asthma & allergy friendly™** are tested to the ASP-LGB-01: 06 Large Bedding Encasing Certification Standard.

The certification process utilizes an algorithm of proprietary and recognized scientific techniques to assess encasings for likely exposure to allergenic and irritant materials, both at the time of purchase and thereafter when in use. Product samples that pass certification testing are granted a certificate stating that the particular encasing meets the requirements for the **asthma & allergy friendly™** ASP-LGB-01: 06 Certification Standard.

Allergy Standards Ltd (ASL) subjects the encasing to both physical and chemical testing to ensure that the encasing does not have properties that is likely to irritate both asthma and allergy symptoms in susceptible people:

- (a) The encasing must provide an effective barrier to the passage of allergen
- (b) Allergen accumulating on the outer surface of the encasing must be removable by the recommended eradication techniques at stipulated intervals
- (c) The encasing must have the ability to withstand the recommended eradication techniques at the indicated frequency
- (d) The fabric of the encasing must be 'breathable' in order to ensure user comfort
- (e) The encasing must not contain chemicals known to trigger allergenic or irritant responses when present above Certification levels.

If you require further information on this aspect of testing please contact:
